01 Abstract

ESG is a term used to represent the sustainable and ethical impacts of a company's corporate and financial interests. It is a non-financial indicator and it is to ensure accountability and systems to manage a corporation's impact, such as carbon footprint, diversity, and inclusion in the workspace. Through the ESG report the companies can achieve sustainability goals. Our solution must rely on **Real-Time Metric Driven Analytics, Risk Forecast, Analysis, Monitoring & Reporting.** ESG can lead to trust with stakeholders, attract investment, reduce costs, improve organizational/Operational efficiency, and a better bottom line. So, our solution is to create several ML/DL models that provide insights on specific companies that the user searches for; the data of ESG can be scrapped from government report, social media, official site.

ESG at Virtusa

- Businesses and consumers are placing a high value on ESG and sustainability in 2022. The PwC survey in 2021 found that 76% of consumers wouldn't buy from companies that treated the environment, employees, or community poorly
- Forbes reports that 92% of Americans are more likely to trust a business if it supports social and environmental issues. Additionally, Employee churn decreases by 25%-55% for companies with dynamic ESG programs, while stock returns increase by 5%-10%

02 Problem Statement

01

Problem Statement

EME Tech 1 - ESG (Environmental, Social, Governance).

To Build a Solution With real-time driven metrics for Global Companies using ESG data and to build trust with the stakeholders, to attract investment, to improve organizational (or) operational efficiency

02

Brief Solution

To Build an application that gives real-time ESG metrics (scores) and other analyzed data of a particular organization in a visually pleasing way, actionable insight, moreover, these data are expected to be displayed in a single dashboard

03 Business Need

01

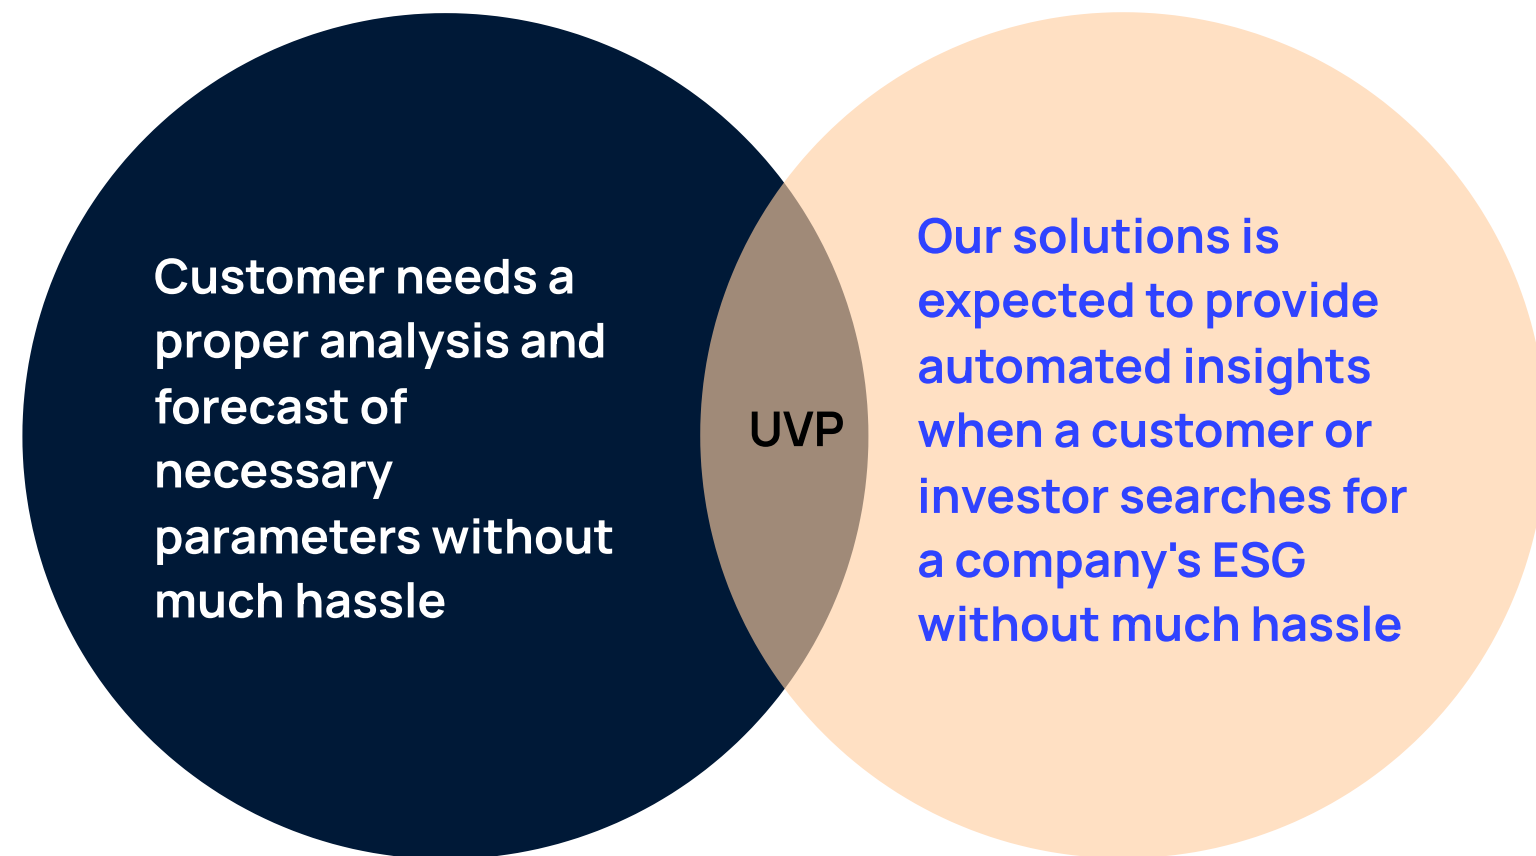

Need Assessment

The ESG Analysis is still lacking a lot of automation; which is what our solution is focusing on.

A good ESG analysis will boost the efficiency of an organization by over 70%. Improving ESG builds trust among Stakeholders and Investors

02

Unique Value Proposition - UVP

| Early stage | Problem | Solution Description |
|--------------|-----------------------|--|
| | Environmental Factors | Providing Insights on how Environemet is affected , such as Air, Water, Energy Performance, Biodiversity, Natural resource depletion, and Climate Change |
| | Social Factors | Giving an analysis of how all the Stakeholders are treated, i.e Customers, Employees, HR's, etc. Providing a relationship scale from 1-10 for each department will be insightful |
| Later stages | Governance Factors | Analyzing the board's diversity, tax strategies, and building a model that learns all the basic policies of ESG to better extract information |
| | Weakness | Listing all the weak area so that the organization can focus on improving those certain listed areas |
| | Forecasting | Predicting the Risk, Growth Factor, etc. |

1. Currently Processing the Unstructured data of a company is itself a major Business need and that is the first step to getting insightful data
2. This ESG report will help investors to confidently invest in a certain organization
3. This Kind of Service is rare, hence provides greater market value and need

04 Target Segment

Customers

Company

Most of the organizations look forward to give ESG analyzing task to some other organization or to a set of people

VC's

Venture Capitalist, Angel Investors, and other VC firms might need an ESG of a certain company before investment

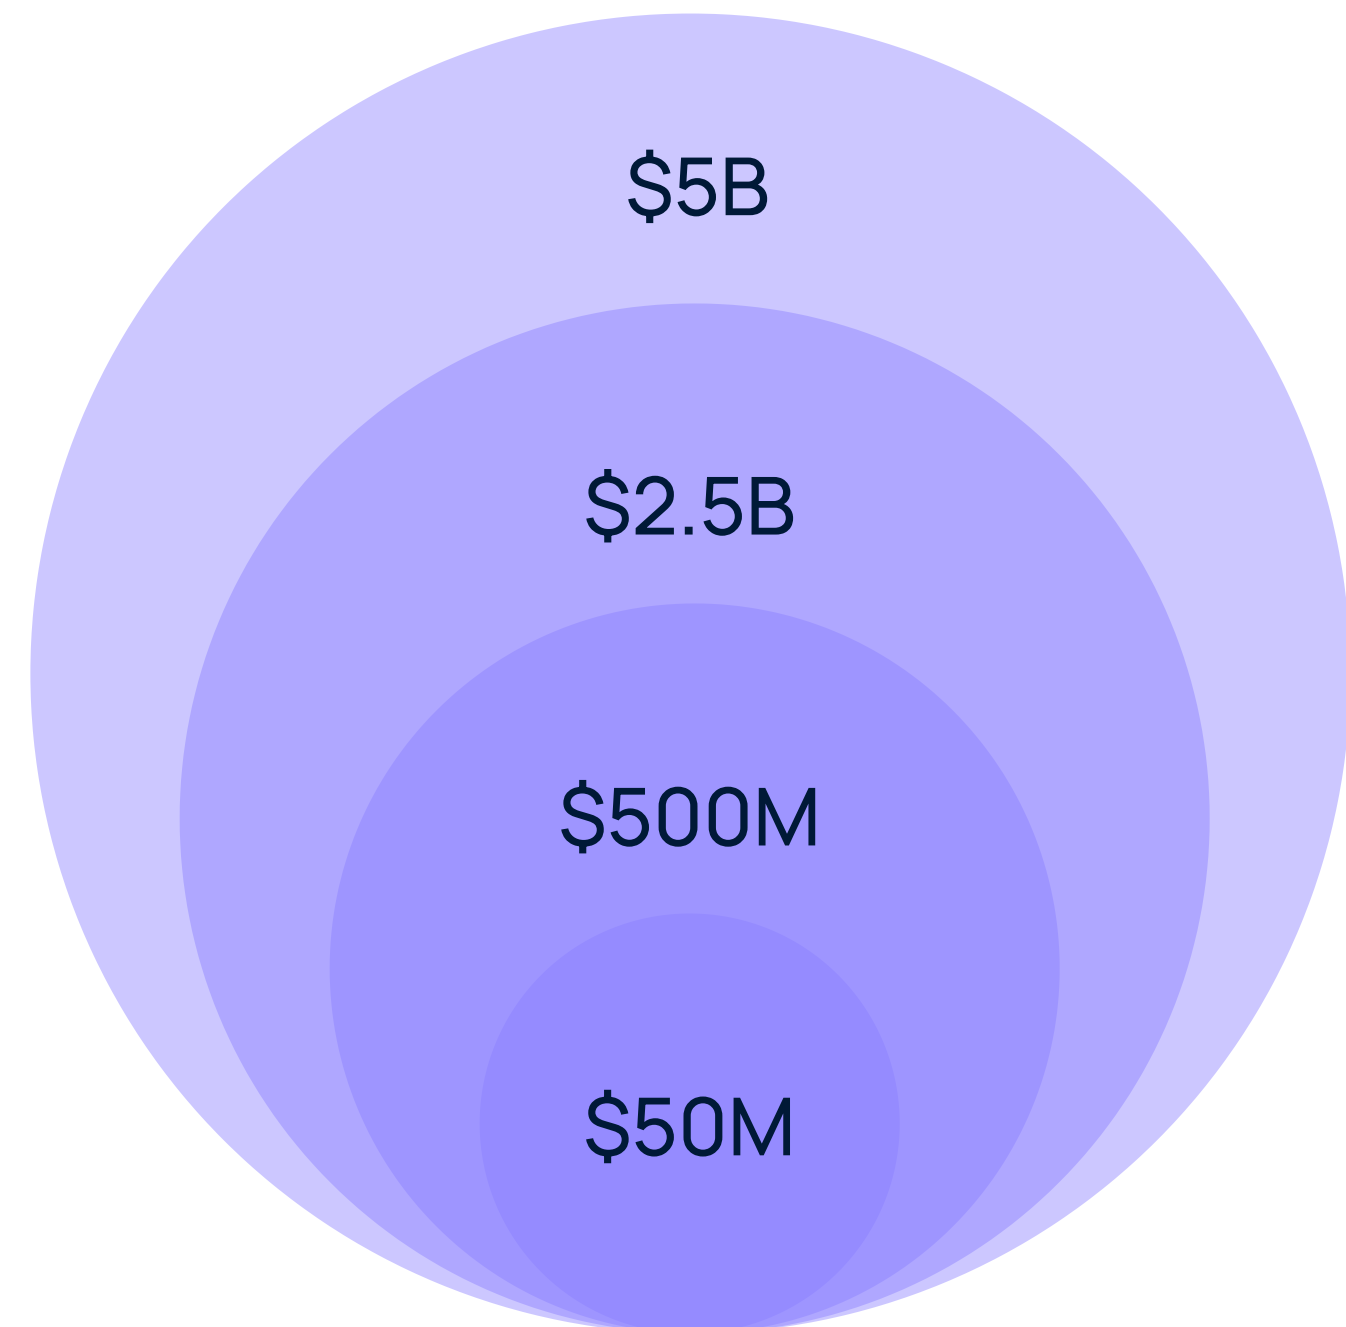

Investors

Independent investors can use this services (tool) for risk free investments

05 Market Size

Market size

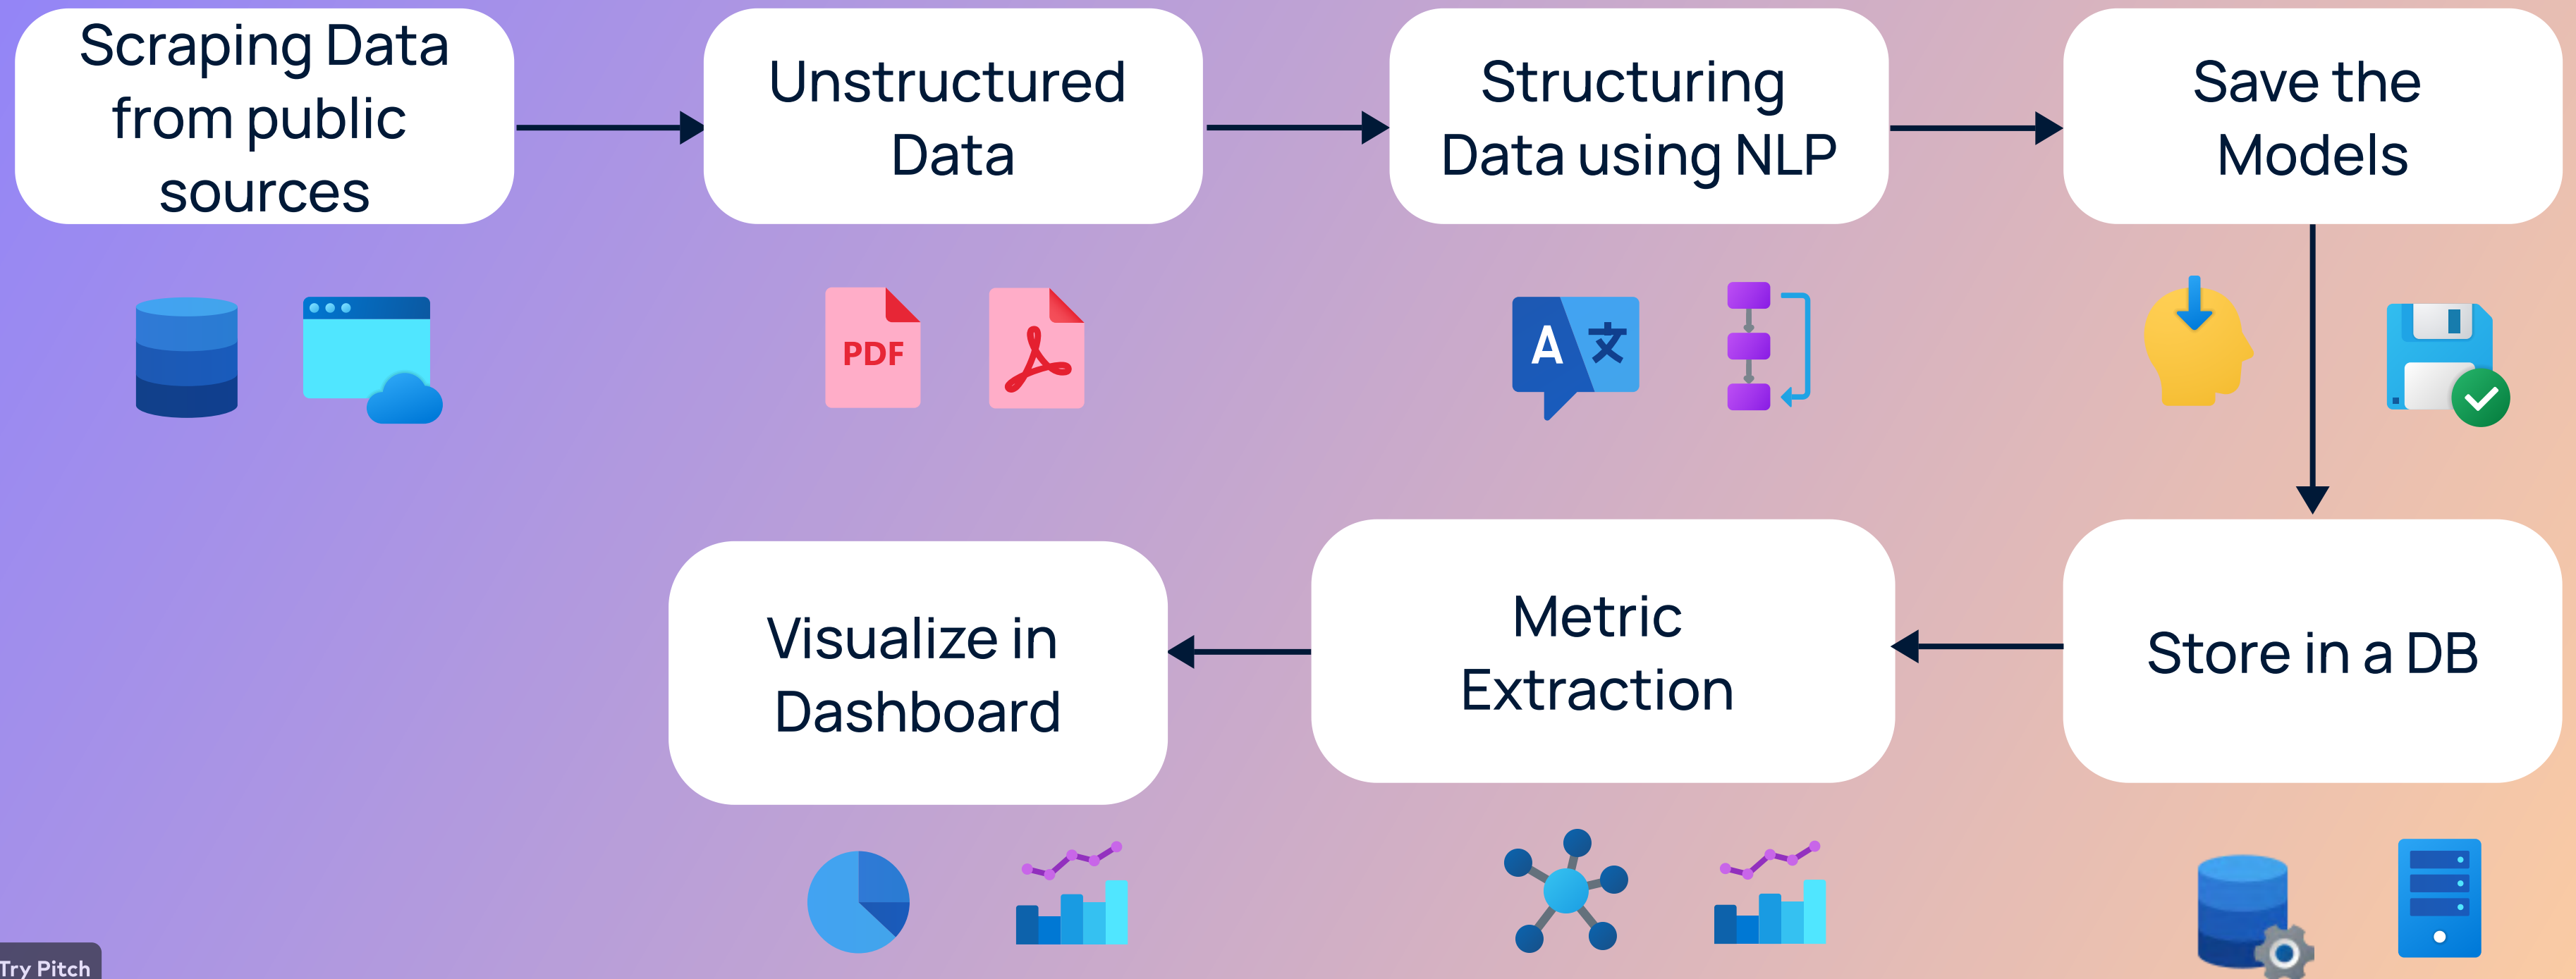

- 01 Total Addressable Market (TAM)**
If we consider every single customers from VC's, AI's, organizations, to educational institutions
- 02 Serviceable Addressable Market (SAM)**
The ESG for all the firms are hard to retrieve, so serviceable customers are Investors and Firms that have some data to provide
- 03 Target Market**
Organizations, and Investors
- 04 Market Share**
Estimating these services in the current market share

06 Solution Details

Solution Roadmap

The solution involves scraping the data for the company the user searches for, after that; giving insights using ML/DL, and with some basic analysis. We can compare what the company says and does, and using some unstructured data we can determine the ESG score

Roadmap Description

01

Scraping Data using Web Scraping Libraries in Python for the keyword and extracting available data from public sources like news, esg rating and reports

02

The Data that we have extracted are mostly unstructured data PDF images, texts, gov reports, social media, and websites

03

Using NLP libraries to preprocess the text, and using keywords to structure the data (topic modeling).

04

Saving the trained ML /DL model in case of further use and increasing accuracy

07

Finally using the CSV file we can plot the pie charts and regression charts using several libraries

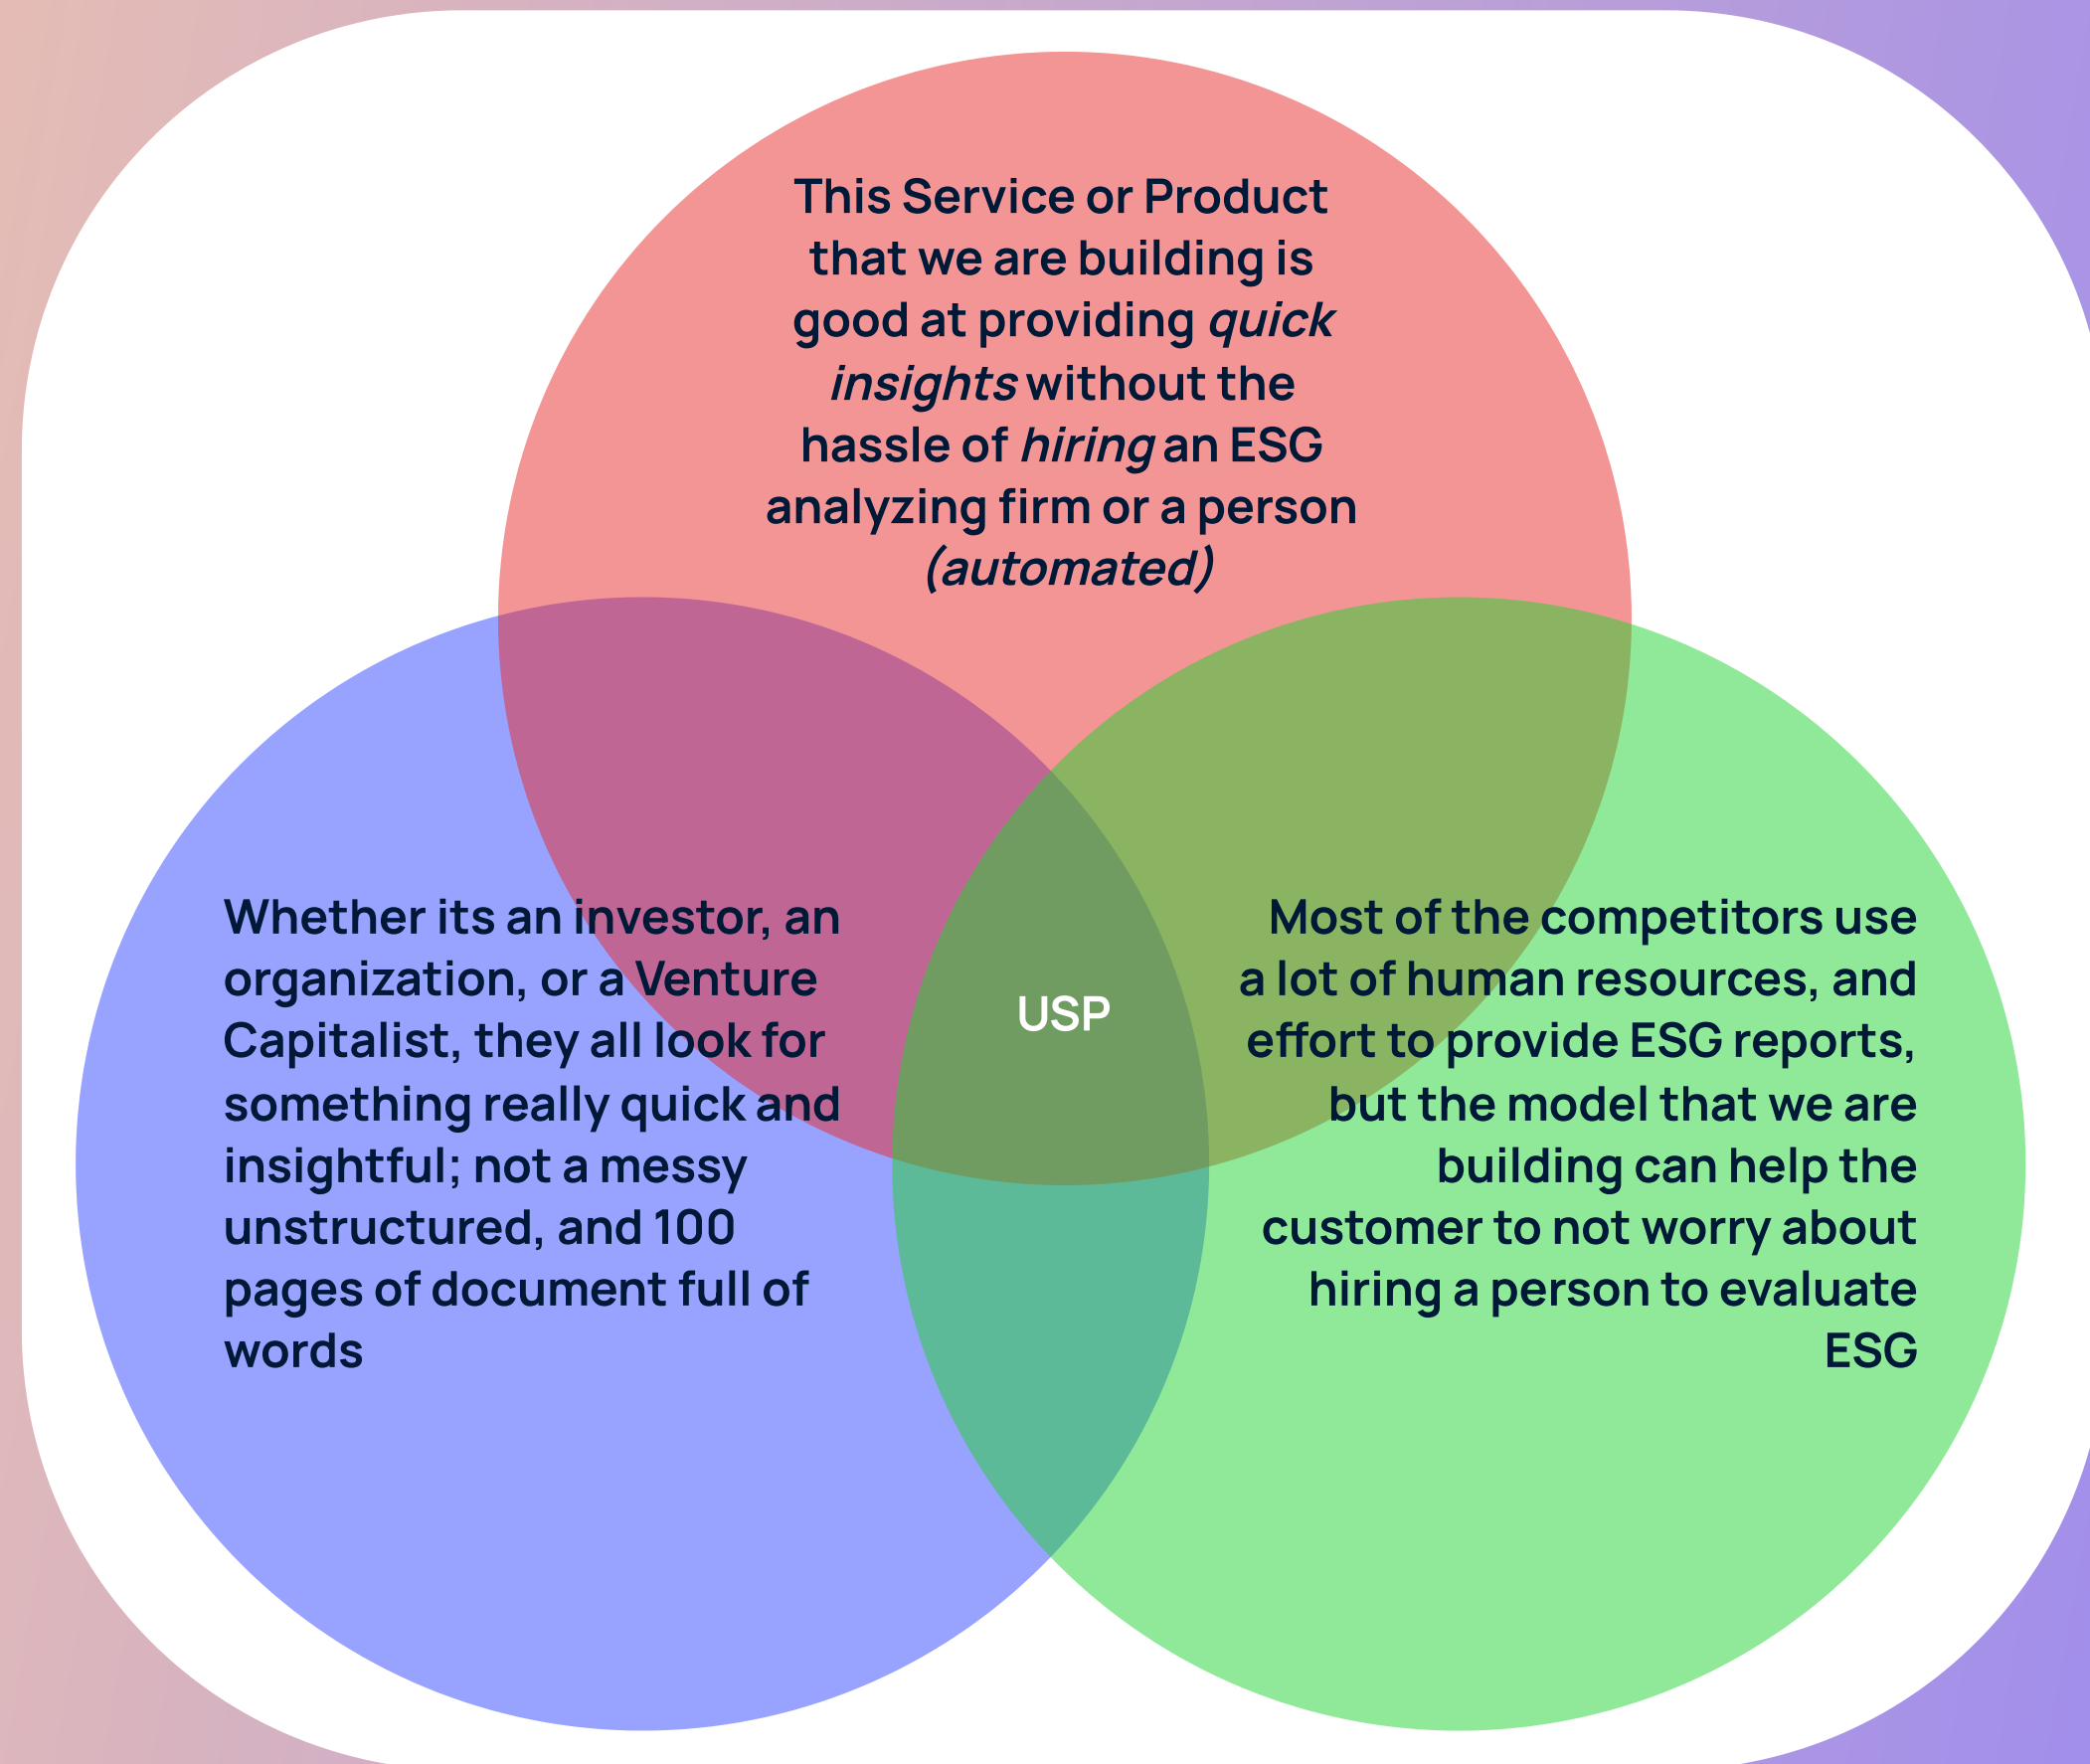

06

Extraction of Esg scores and Metric scores

05

Storing the data for further processing in any Database

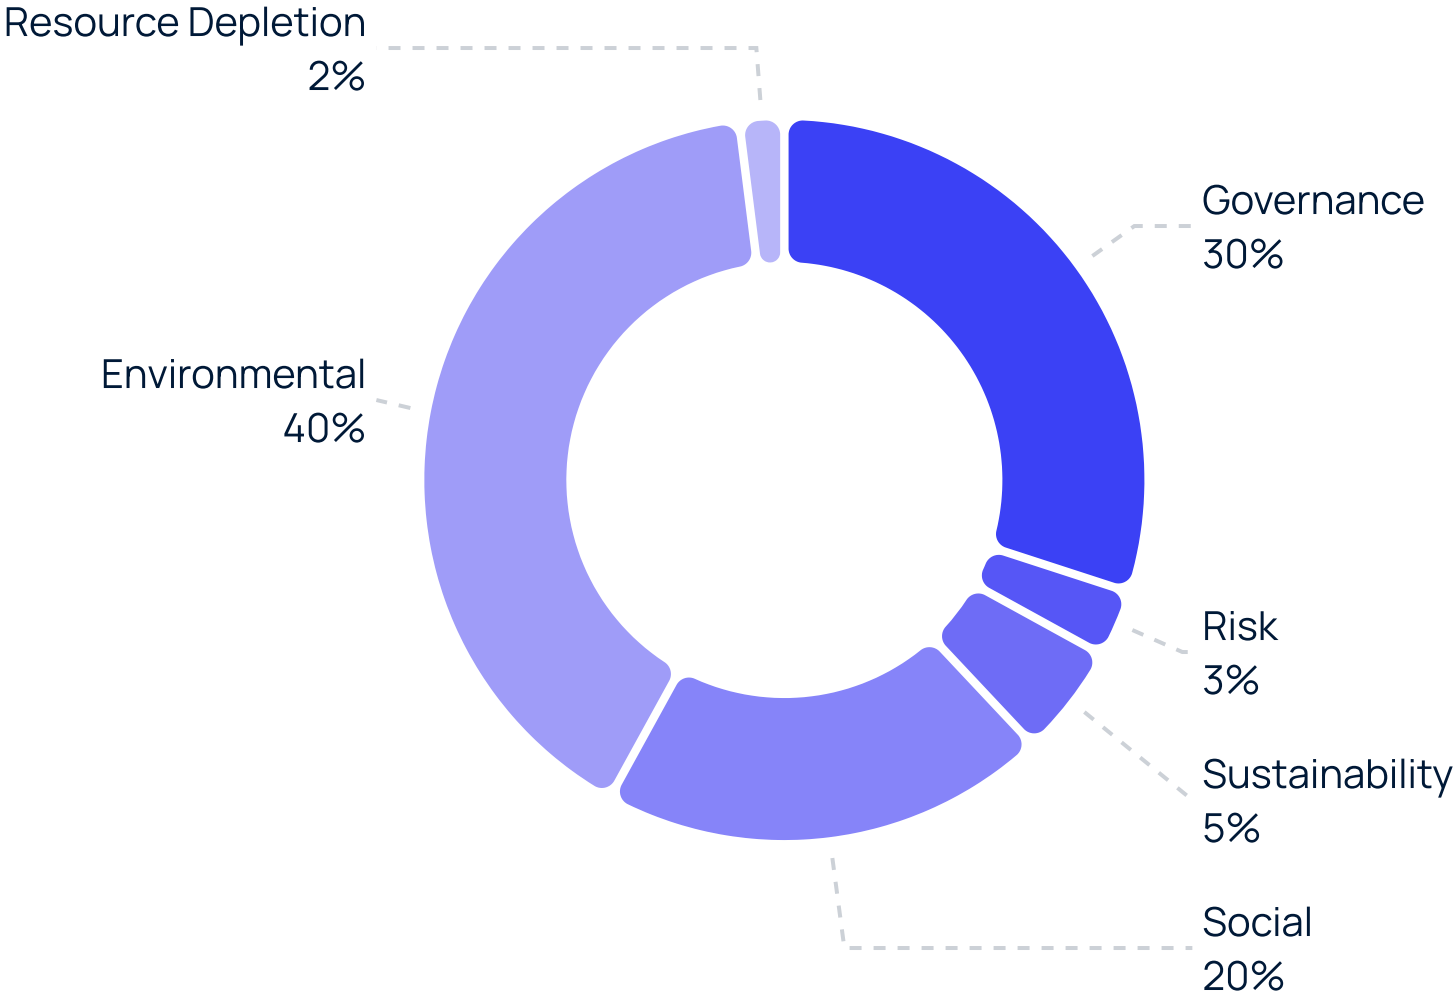

Unique Selling Proposition

Solution Dashboard Overview

This is an overview of how our ESG Analysis looks like, further this might change

Sustainability Chart

Weakness: Resource Management, and Energy Management

Growth Rate

Risk Forecast

Other
Insights
Over
Here

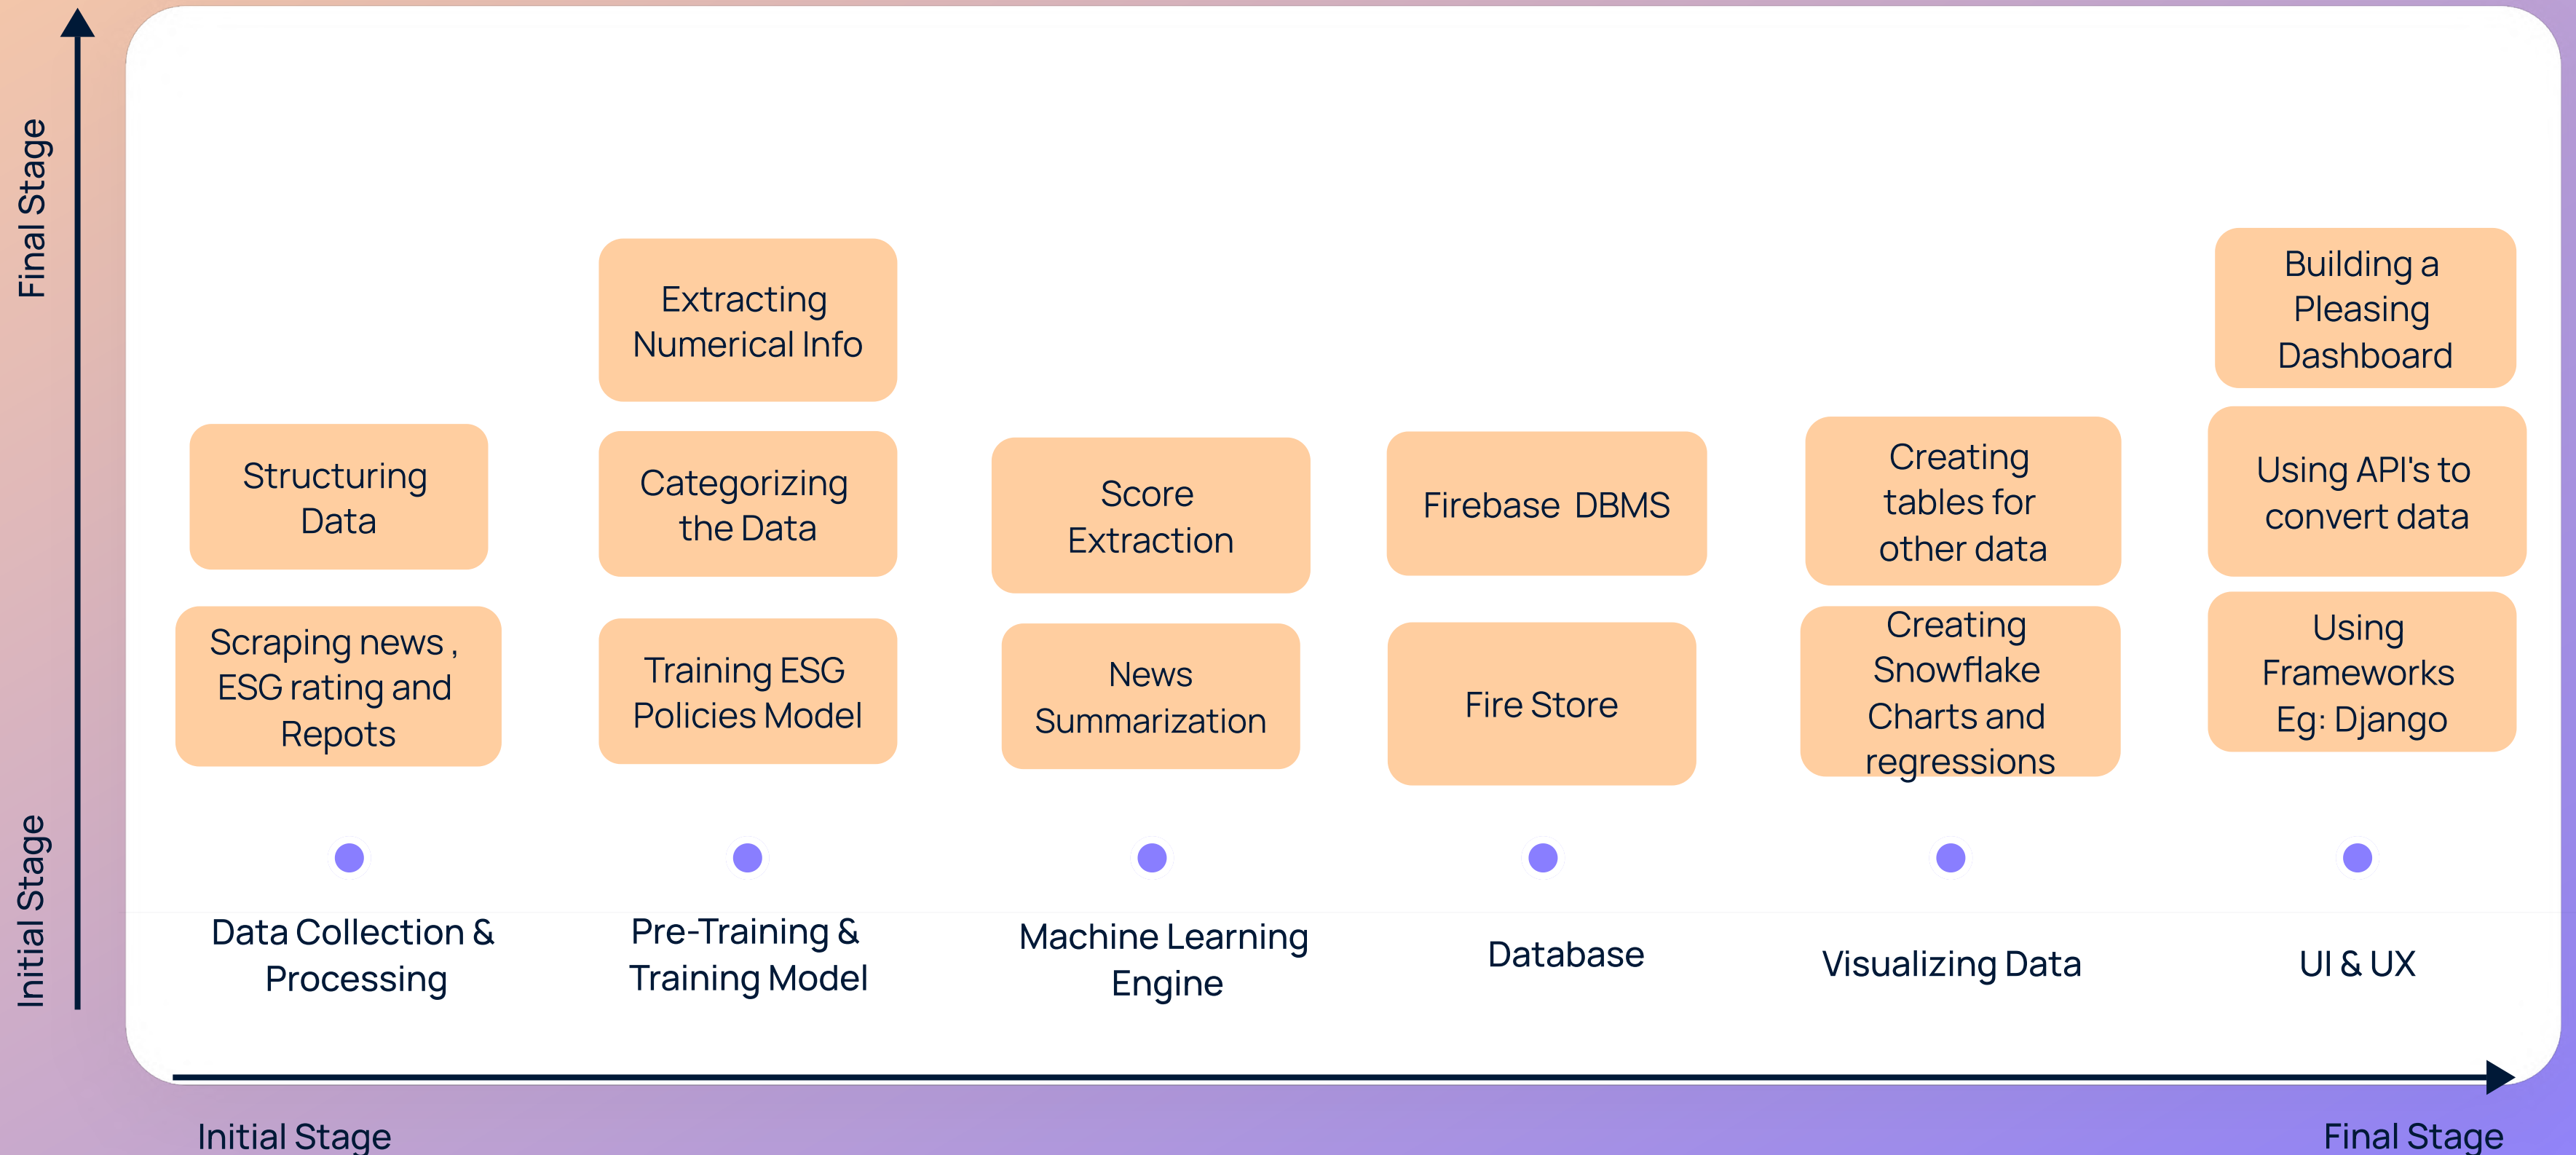

Technology Stack

| Technology Description | Language/Framework |
|---|---|
| Basic Functions, and AI/ML Tasks | Python, Tensorflow, Scikit-learn, and other necessary libraries |
| User interface/ User experience | HTML/CSS, Django, Java Script, and Figma |
| Database, operaion related to Data handling | Excel, CSV, and MySQL |
| Webscrapping, and Data Extraction | Python, Selenium, Beautiful Soup, and other Necessary API's |

07 Further Readiness

Application Process Plan

Market Launch

01

Target Customer Niche

- Investors
- Companies Seeking for ESG report

02

Features over Existing

- Automated
- Provides Better Insights
- KISS (Keep it short and Simple)
- Risk Forecast for Investors

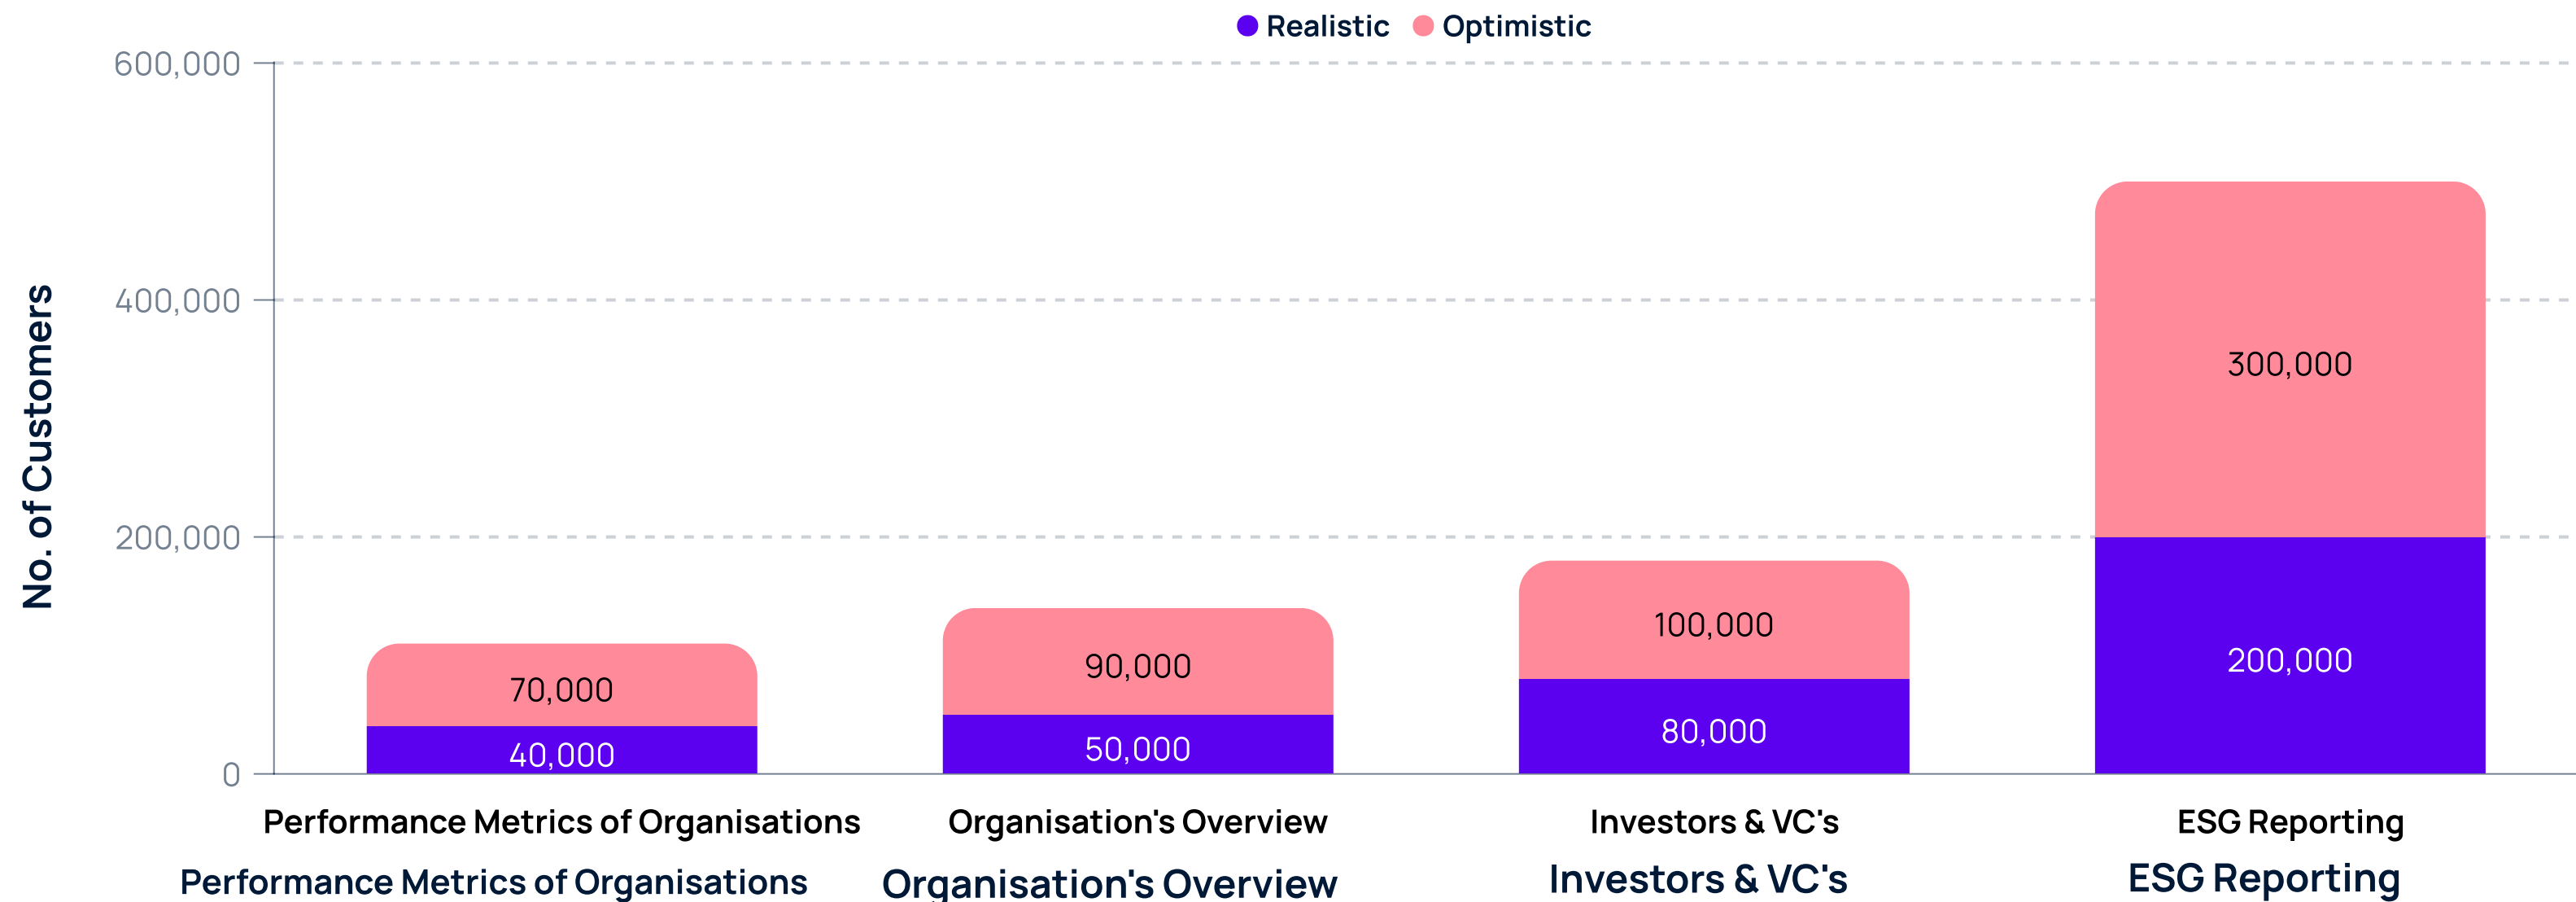

03

Easy to Use

- Simple UI/UX
- Understandable instruction
- Time efficient

Other Segment Applications

Customers who are not looking for ESG but for other applications like overview of a company, for investing in stocks, to know how the organization works in all aspects
